

MINFILE Inventory Detail Report
 BC Geological Survey
 Ministry of Energy, Mines and Petroleum Resources

MINFILE Number: 092JNE019	Name: WATERLOO	Status: Prospect
----------------------------------	-----------------------	-------------------------

Ore Zone/ Year/Report On		Tonnage/ Category	Commodity	Grade	Reference/ Comments
1991	N	Assay/analysis Grab	DUMP	Gold	two dump samples (573R and 574R) from a former trench on the main vein, located on the eastern side of the ridge, yielded 17.38 and 16.90 grams per tonne gold, 9.1 and 12.0 grams per tonne silver, 0.018 and 0.100 per cent lead and 0.780 and 1.695 per cent zinc, respectively Assessment Report 22119
				Silver	
				Zinc	
				Lead	
1991	N	Assay/analysis Grab	NORTHWEST	Gold	Another area of mineralization, located approximately 900 metres to the north west on a ridge and at an elevation of 2245 metres, consists of siliceous cherty sediments hosting hydrothermal quartz veining with semi-massive stibnite and minor pyrite. Grab sample 571R. Assessment Report 22119
				Antimony	
1984	N	Assay/analysis Grab	SOUTHWEST	Antimony	Approximately 250 metres south west of the main showing (on the same ridge), three 10 to 15-centimetre veins are reported 3 metres apart Assessment Report 13323
1984	N	Assay/analysis Chip	VEIN	Silver	Average of three samples across 1.3 metres. Stibnite value from nearby (ie. separate) vein. Assessment Report 13323.
				Gold	
				Antimony	
1984	N	Assay/analysis Grab	VEIN	Gold	from a smaller vein over 10 centimetres Assessment Report 13323
				Silver
