| MINFILE Number: 082FNW043 | Name: WONDERFUL (L.481) | Status: Past Producer |
|----------------------------------|--------------------------------|------------------------------|

| Ore Zone/ Year/Report On | Tonnage/ Category | Commodity | Grade | Reference/ Comments |
|-----------------------------|------------------------------|------------------------|--------------------------------|--|
| DRILLHOLE 2009 | Assay/analysis Drill Core | Silver Zinc | 12 g/t 11.16 % | Underground drill hole DD09-06 intercepted a zone of structural distortion where at least three closely spaced veins of 2.47 metres Höy, T. (2016-06-28): Technical Report – The Slocan Silver Camp |
| UNDERGROUND 2008 | Assay/analysis Chip | Zinc Lead Silver | 44.34 % 3.39 % 228 g/t | underground chip sampling, over 0.12 to 0.65 metre lengths, of the Wonderful vein from a raise between Level 4 and 3 yielded values from 2.47 to 44.34 per cent zinc, 0.08 to 3.39 per cent lead and 10 to 228 grams per tonne silver Höy, T. (2016-06-28): Technical Report – The Slocan Silver Camp |
| DRILLHOLE 2005 | Assay/analysis Drill Core | Silver Zinc | 51.7 g/t 25.33 % | Drilling intercepts on the McLanders vein yielded up to 5.1 grams per tonne silver, 0.2 per cent lead and 0.99 per cent zinc over 2.3 metres (1.5 metres true width) in hole 05-3 and 51.7 grams per tonne silver with 25.33 per cent zinc over 0.8 metre (0.5 metre true width) in hole 05-4 Höy, T. (2016-06-28): Technical Report – The Slocan Silver Camp |
| NORTH 2004 | Assay/analysis Rock | Lead Zinc Silver | 50.29 % 24.91 % 1243 g/t | a new vein was discovered approximately 200 metres north and down-slope of the No. 1 adit. The vein comprised mainly fine-grained and sheared galena mineralization in angular subcrop. Fifteen select samples yielded from 0.84 to 50.29 per cent lead, 7.27 to 24.91 per cent zinc and 2 to 1243 grams per tonne silver Höy, T. (2016-06-28): Technical Report – The Slocan Silver Camp |
| TRENCH 2004 | Assay/analysis Chip | Lead Zinc Silver | 45.22 % 3.74 % 2042 g/t | Trenching on the McLanders vein exposed a 0.25-metre wide galena-rich vein over 20 metres strike length. Four chip samples across the vein, over 0.2 to 0.4-metre, yielded from 3.65 to 45.22 per cent lead, 1.47 to 3.74 per cent zinc and 181 to 2042 grams per tonne silver Höy, T. (2016-06-28): Technical Report – The Slocan Silver Camp |
