DRILLHOLE 2014 N	Assay/analysis Drill Core	Phosphate Cerium Lanthanum Yttrium	23.10 % 0.014 % 0.024 % 0.064 %	Drilling yielded intercepts of 23.10 per cent P2O5 with 0.014 per cent cerium, 0.024 per cent lanthanum and 0.064 per cent yttrium over 0.6 metre (12.80 to 13.40 metres down-hole) in hole M-14-05, 24.80 per cent P2O5 over 0.63 metre (14.20 to 14.83 metres down-hole) in hole M-14-06 and 22.49 per cent P2O5 over 0.96 metre (22.80 to 23.76 metres down-hole) in hole M-14-07. Cerium, lanthanum and yttrium values were not reported for hole M-14-06 and -07. Assessment Report 35314
MAIN 2014 N	Assay/analysis Bulk Sample	Phosphate	21.05 %	a 1000 tonne bulk sample, averaging 21.05 per cent P2O5, was excavated from the upper shaft area Assessment Report 35314
SHAFT 2014 N	Assay/analysis Rock	Phosphate	24.44 %	three samples from the upper inclined shaft area yielded from 20.34 to 24.44 per cent P2O5 Assessment Report 35130
TRENCH 2014 N	Assay/analysis Rock	Phosphate	25.90 %	two samples from the main trench area, near the lower inclined shaft, yielded 22.51 and 25.90 per cent P2O5, respectively Assessment Report 35130
MAIN 1930 N	500 kt Unclassified	Phosphate	15 %	Historic work, in the early 1930's, indicates an average grade of the basal phosphorite horizon of 15 per cent P2O5 across 1.2 metres for a total of 500000 tonnes Assessment Report 35130
