|---------------------------------|-----------------------------------|-------------------------|
| MINFILE Number: 083D 002 | Name: BEND NORTH ROAD ZONE | Status: Prospect |
|---------------------------------|-----------------------------------|-------------------------|

| Ore Zone/ Year/Report On | Tonnage/ Category | Commodity | Grade | Reference/ Comments |
|-----------------------------|------------------------------|------------------------|------------------------------|--|
| SAMPLE 2023 N | Assay/analysis Rock | Zinc Lead Silver | 6.95 % 0.32 % 19.1 g/t | two rock samples (Bend-01 and -02) from the main zone yielded 4.31 and 6.95 per cent zinc, 0.67 and 0.32 per cent lead with 14.0 and 19.1 grams per tonne silver, respectively Assessment Report 41481 |
| NORTHWEST 2016 N | Assay/analysis Drill Core | Zinc Lead Silver | 2.16 % 0.30 % 3.8 g/t | drill hole CMR16-01, located several hundred metres northwest of the plotted location of the occurrence, yielded 1.41 per cent zinc over 0.3 metre (59.8 to 60.1 metres down-hole) and 2.16 per cent zinc, 0.30 per cent lead with 3.8 grams per tonne silver over 0.2 metre (372.7 to 372.9 metres down-hole) Assessment Report 36408 |
| TRENCH 1992 N | Assay/analysis Rock | Zinc Lead Silver | 7.06 % 2.39 % 23.2 g/t | a sample (81708) from a 15-centimetre wide fine grained, sphalerite-pyrrhotite band at the dolomite-siliceous schist contact exposed in a new trench in the main occurrence area Assessment Report 22637 |
| SOUTHEAST 1992 N | Assay/analysis Drill Core | Zinc Lead Silver | 3.13 % 1.14 % 26.7 g/t | drill hole (TK-92-06), located to the east of Three Mile Creek and approximately 1.3 kilometres east-southeast of the plotted location of the occurrence, tested the strike extension and continuity of the occurrence to the nearby Bend Canyon Zone (MINFILE 083D 001) and yielded 3.13 per cent zinc, 1.14 per cent lead and 26.7 grams per tonne silver over 0.54 metre (193.16 to 193.70 metres down-hole) from a mineralized band of massive pyrrhotite-pyrite and minor sphalerite-galena associated with a 30-centimetre wide quartz band Assessment Report 22637 |
| TRENCHES 1991 N | Assay/analysis Rock | Zinc Lead Silver | 0.61 % 0.20 % 7 g/t | sampling of 5- to 25-centimetre wide, bedding parallel bands of massive pyrite with minor galena and sphalerite from historic trench 3 yielded up to 0.55 per cent zinc, 0.12 per cent lead and 2.4 grams per tonne silver, while a sample of galena and sphalerite occurring mainly as lenses and laminations associated with minor narrow quartz veinlets in historic trench 1 yielded 0.61 per cent zinc, 0.20 per cent lead and 7 grams per tonne silver Assessment Report 22064 |

| Ore Zone/ Year/Report On | Tonnage/ Category | Commodity | Grade | Reference/ Comments |
|-----------------------------|----------------------|-----------|-------------|--|
| SOUTHWEST | | Silver | 2.0 g/t | Drillhole MGM-1 intersected quartzite with occasional high silica intervals with secondary interstitial carbonate and infrequent thin chocolate brown dolomitic horizons. The hole was essentially barren except for trace amounts of galena in fracture fillings. A sample taken at 35.08 metres assayed 0.27 gram per tonne gold, 2.0 grams per tonne silver and 0.15 per cent zinc over 0.05 metre Assessment Report 15251 |
| 1985 | Assay/analysis | Zinc | 0.15 % | |
| N | Drill Core | Gold | 0.27 g/t | |
| SAMPLE | | Silver | 27.0000 g/t | Sample type and analytical technique are unknown. Sample is from lower zone. Assessment Report 9994. |
| 1981 | Assay/analysis | Lead | 2.0000 % | |
| N | Rock | Zinc | 6.0000 % | |
