MAIN			Gold Silver Tellurium Lead	142.2 g/t 6.9 g/t 0.03 % 0.6 %	In 1941 a test shipment of 98 kilograms was shipped from the Eclipse occurrence to a government sampling plant in Prince Rupert. It is unknown if the report refers to this occurrence or the nearby Eclipse (MINFILE 092L 101). Assessment Report 14744

UNDERGROUND			Gold	53.14 g/t	a 210 metre later underground exploration program, on three levels (90 metres vertically), outlined five narrow zones of native gold-pyrite-quartz mineralization. Detailed channel sampling of the zones yielded an average grade of 53.14 grams per tonne gold over 0.22 metres for a cumulative strike length of 69 metres Assessment Report 14369
