| SAMPLE<br>2003      N       | Assay/analysis<br>Grab | Gold<br>Silver | 0.229 g/t<br>36.2 g/t     | Samples (133564 and 132619) from the Saunders South area yielded 0.229 and 0.124 gram per tonne gold with 9.3 and 36.2 grams per tonne silver, respectively. Assessment Report 27442                   |
| SAMPLE<br>1983      N       | Assay/analysis<br>Grab | Silver<br>Gold | 10.2000 g/t<br>0.1200 g/t | A sample (S-8-31-4) from an outcrop of siliceous, brecciated hornblende-feldspar porphyry with quartz-hematite fractures and veins, up to 6-centimetres wide, hosting pyrite. Assessment Report 12716. |
| SAMPLE<br>1981      N       | Assay/analysis<br>Grab | Gold           | 0.49 g/t                  | Samples (DN-15 and -20) taken from zones of silicification with pyrite yielded 0.49 and 0.44 gram per tonne gold, respectively. Assessment Report 10349                                                |
| NORTHEAST<br>1981      N    | Assay/analysis<br>Grab | Gold           | 2.94 g/t                  | A sample (S-DN-18) from a zone of silicification with pyrite in a 50-metre-wide gossan, located along the ridge to the northeast of the Saunders South occurrence. Assessment Report 10349             |
