Ore Zone/ Year/Report On		Tonnage/ Category	Commodity	Grade	Reference/ Comments
2005	N	Assay/analysis	Gold	1.05 g/t	drill hole PN05-10, a re-test of the previous years hole, yielded a 2.30-metre interval grading 6.8 grams per tonne silver associated with a shear zone and a 7.60-metre interval of quartz diorite containing 1.05 grams per tonne gold. Most of this hole contains anomalous tungsten and zinc, a signature commonly seen along the Silver Ridge Zone. Extreme technical difficulties due to a very unstable fault zone again did not allow the completion of the hole. Assessment Report 28083
		Drill Core			
2004	N	Assay/analysis Drill Core	Copper	0.23 %	From a 2.4-metre drill intersection. The intercept came from the end of the hole, approximately 120 metres down-hole, which was terminated due to technical difficulties in a zone highly fractured intrusive rock hosting disseminated pyrite and an un-identified black mineral. The drill hole also yielded anomalous gold values, of up to 0.364 gram per tonne, over the top 27 metres of the hole (Assessment Report 27602). Assessment Report 27602.
			Gold	0.35 g/t	
			Silver	1235 g/t	
			Zinc	0.22 %	
			Tungsten	0.11 %	
2003	N	Assay/analysis Grab	Silver	4.0 g/t	grab samples (WG-PN-03-18) over 1.5 metres of outcrop and float of monzonite with malachite, chalcopryite and trace galena on fractures Assessment Report 27310
			Copper	0.120 %	
			Lead	0.434 %	
			Zinc	0.125 %
