Ore Zone/ Year/Report On		Tonnage/ Category	Commodity	Grade	Reference/ Comments
2002	N	Assay/analysis Chip	Zinc	1.83 %	In 2002, chip samples taken by Strategic Metals Ltd. across the suspected bulk sample site at the Wolverine showing and down along the horizon from this site, yielded up to 1.83 per cent zinc, 97.9 parts per million germanium and 50.4 parts per million gallium across 2.1 metres (sample M11654). Assessment Report 27149.
			Germanium	0.00979 %	
			Gallium	0.00504 %	
1993	N	Assay/analysis Rock	Zinc	2.4 %	Sample (431-K) across 0.6 metre. Assessment Report 23138.
			Lead	0.64 %	
1987	N	Assay/analysis Trench	Lead	0.36 %	Results of "bulk sampling" collected in 1986, over a width of 2.1 metres. Sphalerite occurs with silica as breccia and/or stratabound in Dunedin Fm. reef limestone. Galena present. Assessment Report 16722.
			Zinc	6.28 %	
			Gallium	0.003 %	
			Germanium	0.04 %	
1987	N	Assay/analysis Trench	Zinc	6.26 %	Results of "bulk sampling" collected in 1986, over a width of 2.5 metres. Galena and sphalerite occur as lenses or pods with massive barite within Stone Fm. limestone. Little or no silica associated with sulphides. Mineralization is typically near Dunedin Fm. contact. Assessment Report 16722.
			Gallium	0.003 %	
			Germanium	0.008 %	
1987	N	Assay/analysis Trench	Lead	0.01 %	Results of "bulk sampling" collected in 1986, over a width of 1.3 metres. Assessment Report 16722.
			Zinc	22.69 %	
			Gallium	0.004 %	
			Germanium	0.15 %
