Ore Zone/ Year/Report On	Tonnage/ Category	Commodity	Grade	Reference/ Comments
EAST  2016	N  Assay/analysis Grab	Copper	1.9 %	Four samples (M456711-712 and M456721-722) were taken from a small (approximately 100 by 120 meters) zone, located approximately 450 metres to the east, containing well mineralized but poddy copper sulfide bearing veins including pyrite-chalcopyrite-magnetite veins and specular hematite-sulfide-quartz-calcite veins associated with variable chlorite-epidote-magnetite/hematite + albite alteration in a fine grained, locally flow banded hypabyssal intrusive rock. This is associated with widespread intrusive and polymictic magmatic-hydrothermal breccia. The samples averaged 1.9 per cent copper and 9.2 grams per tonne silver. Assessment Report 36482
SAMPLE  2004	N  Assay/analysis Grab	Gold Copper	1.49 g/t 1 %	A minimum of 1 per cent copper. Assessment Report 27638.
SOUTHWEST  1995	N  Assay/analysis Grab	Copper	1.31 %	A grab sample (GB-11) from a narrow calcite vein in massive epidote hosting chalcopyrite, specularite and malachite staining, located approximately 500 metres to the southwest. Assessment Report 24284
